Certification Program

August 2008

# Get Serious! Get Certified!

The purpose of the Symantec Certification Program is to set a worldwide, industry recognized standard for those certified to demonstrate the highest levels of competency and productivity in data protection, high availability, and security. Those certified have demonstrated the knowledge and skills to effectively use and manage Symantec applications, and possess high-performance technical problem solving expertise.

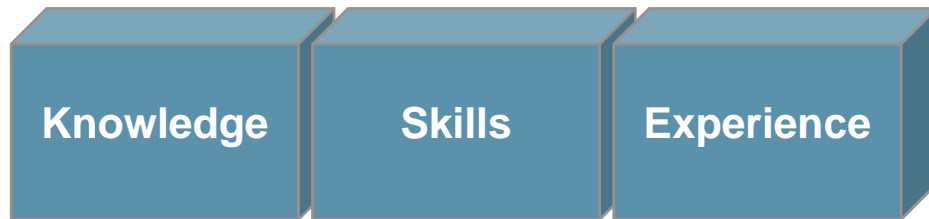

Certification helps fill the needs of today's IT workforce by identifying individuals with skills in demand. It's a valuable investment for both the IT manager and employers to maximize efficiency in recruiting, hiring, training, lowering operating costs, and promoting employees.

For Symantec, Certification gives industry educators the standards essential to prepare individuals to meet the job skills in demand today.

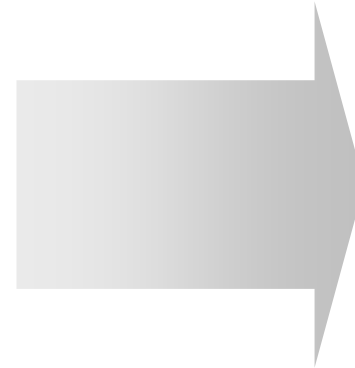

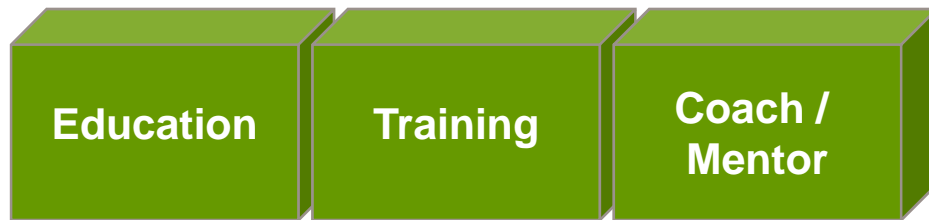

## **What is the benefit of becoming a Symantec Certified Specialist?**

- Increased potential for career advancement
- Increased technical credibility and market recognition
- Affiliation with a global community of industry IT professionals
- Distinction from peers
- Individual commitment to being skilled and current
- Employer and customer recognition

# Certification = Competency

*Equates to*
