

**Symantec DeepSight™ Early Warning Services**

The first line of defense for proactive enterprise security.

Symantec Enterprise Security Services

In today's enterprise, the security threats arrive faster. They're more sophisticated than ever before.

It's almost impossible to stay ahead of the threat curve. Trying to determine where the next attack is coming from and what its target might be is nearly a full time job, leaving little time for productive IT activities let alone risk mitigation. Symantec DeepSight Early Warning Services can help you meet the challenge with solutions customized for the precise specifications of your IT environment.

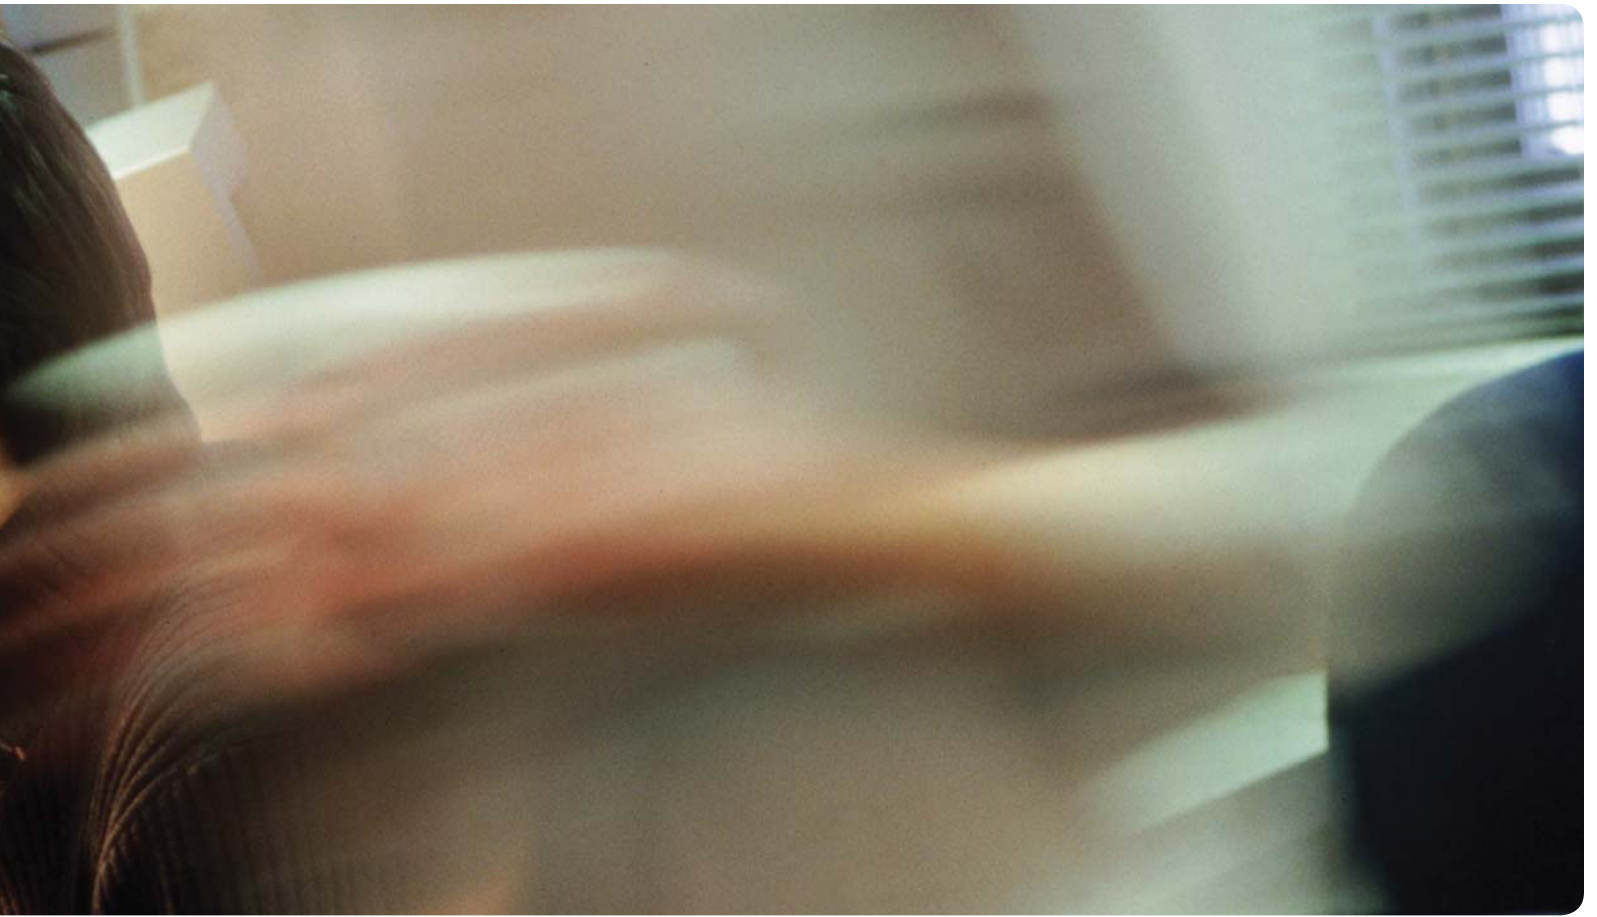

The award-winning services are your first line of defense in taking a more proactive stance towards enterprise security.

**A smart way to protect your organization's reputation—and its bottom line.**

More than 82 new traditional security vulnerabilities are identified each week, and the time between their discovery and exploitation is rapidly shrinking, exposing enterprises to a growing number of aggressive threats. Symantec's most recent Internet Security Threat Report unveils a new trend with exponential growth in site specific vulnerabilities with over 432 per week as the web has quickly become the distribution point for malicious code and attacks.

The cost of recovery is often

Corporations are being driven by increasing demands of regulatory and compliance requirements and policies. These mandates have an over arching affect on the risk and security posture that a corporation and its' IT staff has to respond to. If exploited, it can have a major impact on the bottom line.

more than prevention.

**Symantec DeepSight™ Early Warning Services** can help you meet the challenge. Supported by the world's most-trusted security intelligence infrastructure, the services enable enterprises to take timely action against today's threats and stay ahead of tomorrow's vulnerabilities and malicious code. They provide customized alerts tracking over 55,000 technologies, and early access to analyses of emerging threats, helping you to proactively manage security and mitigate risks before they can harm your business.

- **Maintain continuity of operations.** Security intelligence helps you make more informed decisions and respond effectively to vulnerabilities and malicious code. Advance notification allows you to respond rapidly in order to prevent downtime.
- **Improve efficiency.** Information delivered automatically to people who can act upon it increases the productivity of your IT organization and helps you prioritize your resources. You spend less time tracking potential threats and more time stopping real ones.
- **Achieve measurable results.** By taking a proactive stance to ensure enterprise security, you help your organization protect its brand reputation and maintain its competitive advantage.

**Symantec DeepSight™ Threat Management System** is Symantec's flagship early warning offering. The service combines a view of the global threat landscape with early warning protection, and delivers decision support and actionable intelligence.

- Tracks the full life cycle of threats—from vulnerability to exploit to global attack activity
- Delivers automated alerts of emerging threats, including vulnerabilities, worms, global attacks, adware, spyware, and domain-specific attacks
- Provides complete analyses and risk assessments, including countermeasures to mitigate attacks
- Offers coverage and notifications customized to meet the unique needs of your industry, technologies, network domain, and more
- The Honeynet is an extensive virtual network of unprotected systems designed to attract security risks provides a new data stream for the tracking and analysis of threats in the wild
- Network infection alerting monitor allows Symantec DeepSight customers to be alerted when malicious activity has been recognized as originating from within their network
- Brand protection alerting monitor allows Symantec DeepSight customers to be notified when their brand is being adversely affected
- Select optional delivery of real-time Symantec DeepSight intelligence list information via XML for integration into customer applications or select the option to configure alerts to your RSS reader

**Symantec DeepSight™ Alert Service** is a streamlined offering focusing exclusively on the automated delivery of actionable intelligence, including vulnerability, malicious code, spyware, adware, and domain alerts.

- Delivers timely alerts customized for your hardware and software environment, covering 55,000 technologies from over 8,000 vendors
- Provides comprehensive, prioritized alerts, including in-depth analyses, attack mitigation strategies, patches, and recommended workarounds
- Offers powerful research capabilities to support proactive security initiatives

**Symantec DeepSight™ DataFeeds** enables customers to easily build automated processes to retrieve and integrate vulnerability and security risk information into their organization's security threat management system. Customers can choose from a variety of security data sources to get access to real-time, reliable, comprehensive threat information:

- **Security risk datafeed.** Provides adware, spyware, and malicious code alerts based on a detailed analysis of active threats
- **Vulnerability database datafeed.** Provides a single, customizable source for vulnerability information, including mitigation guidance, impact analysis, and links to security patches
- **Common datafeed.** Facilitates change management to vulnerability databases

## Powered by the Symantec™ Global Intelligence Network

Symantec DeepSight Early Warning Services is supported by the world's most comprehensive Internet threat database. The Symantec Global Intelligence Network leverages data gathered from 120 million client, server, and gateway systems and some 40,000 registered security sensors monitoring network activity in over 200 countries. And Symantec maintains the largest database of security risks, detailing over 25,000 vulnerabilities. The depth of Symantec's security intelligence means that subscribers receive a wealth of information to help them better manage risks. Threat data includes:

- Over 200 countries
- 25,000 vulnerabilities

Today's IT environment is plagued by more threats that are moving faster and doing more damage than ever before.

Trying to stay ahead of the threat curve is a time-consuming drain on IT resources. To get ahead requires a proactive approach to security supported by a global threat perspective. Symantec DeepSight Early Warning Services delivers the actionable intelligence you need to make faster, better decisions—the kind of decisions that will help you reduce risks and control costs.

You can experience the first line of defense for proactive enterprise security firsthand by taking advantage of a 30-day free trial.
