

Symantec™ Antivirus for Caching

Fast, scalable, and reliable virus protection for application files on caching devices

Overview

Rapid access to content is critical to the success of enterprises of all sizes. Content delivery can be accelerated and bottlenecks reduced by storing repetitive, bandwidth-consuming content closer to end users and centrally managing its flow via the use of caching devices. Because cached data consolidates enterprise traffic, it is an ideal point to check the traffic for viruses. While many organizations have deployed virus protection at the SMTP gateway to stop email-borne threats, the HTTP caching gateway is often overlooked. Casual employee Web surfing and downloads expose organizations to risk at the gateway even before these threats can affect desktops. At the same time, Web-based email opens a new virus propagation route that many organizations believe was closed through the deployment of SMTP gateway protection. Symantec AntiVirus for Caching provides a powerful and scalable solution to protect against the spread of viruses through caching devices.

Key Features

- Provides scalable and reliable virus protection for both HTTP and FTP/HTTP traffic served through, or stored on, caching devices.
 - Certified for leading caching solutions, including Blue Coat ProxySG.
 - Runs on Sun Solaris, Red Hat Linux, and Microsoft Windows 2000/2003 Server platforms.
 - Virus definitions and engines are updated automatically using Symantec LiveUpdate with no interruption in virus scanning.
-

System Requirements

Supported Operating Systems

- Windows 2008 (32-bit and 64-bit)
- Windows 2008 R2
- Windows 2000 Server with the latest service pack
- Windows 2003 (32-bit and 64-bit)
- Windows Server 2003 R2 (32-bit)
- Red Hat Enterprise Linux 5.x (32-bit and 64-bit)
- Solaris(SPARC) 9 and 10 (32-bit)
- Red Hat Linux Enterprise Server 3 and 4 (32-bit)
- Red Hat Linux Advanced Server 3 and 4 (32-bit)
- USE Linux Enterprise Server 9 and 10 (32-bit)
- All the supported operating systems are supported

Supported Browsers

- Mozilla Firefox 1.5 or later
- Microsoft Internet Explorer 6 (SP1) or later

Minimum Hardware Configuration

- 2.4 GHz Pentium 4 or 1 GHz SPARC
 - Java 5 or 6
 - 1 GB RAM
 - 500 MB hard disk space available
 - 1 NIC running TCP/IP with a static IP address
-
