

Symantec™ Protection Suite Enterprise Edition for Gateway

Maximum messaging, Web and network security with minimum complexity

Overview

Symantec™ Protection Suite Enterprise Edition for Gateway safeguards confidential data and employee productivity by creating a protected messaging, Web and network environment. Reduce costs, eliminate complexity and increase the efficiency of your network and employees by combining industry-leading data loss prevention, messaging security, and defense against browser-based attacks. Symantec Protection Suite Enterprise Edition for Gateway is an unparalleled combination of award-winning gateway technologies from the world leader in security, enabling you to comprehensively protect, easily manage, and automatically control your messaging, Web and network environment.

Leveraging the new Symantec security management solution, Symantec™ Protection Center, the Protection Suite Enterprise Edition for Gateway consolidates access to threat, security, and operational dashboards that give decision makers deep visibility across the security infrastructure while delivering real-time and actionable information. Simplify and secure your IT infrastructure with this unique solution from the world leader in security.

Key benefits

Comprehensive gateway protection

- Protect with confidence using market-leading gateway technologies and identify threats before they propagate
- Secure your gateway against data loss, protect against malware, spam, and enforce network access to keep threats out, before they cause disruptions
- Secure sensitive data and valuable confidential information at the gateway with email encryption, advanced content filtering, and botnet protection
- Automatically manage access to your network from unmanaged and managed endpoints through policy compliance

Efficient deployment, management and administration

- Offering single sign-on and management access to protection components across heterogeneous systems with Symantec Protection Center management console
- Quickly deploy with minimal disruption to your environment through easy management and optimized utilization of system resources
- Automate processes and responses to incidents ranging from outbreaks to loss of sensitive data
- Meet IT policy requirements with granular control over policies and features that are easily configurable and selectively deployable
- Eliminate additional steps and costs with a single decision, purchase, and vendor for gateway security

Reduce cost and complexity

- Protect proactively with the Symantec™ Global Intelligence Network, providing real-time security intelligence for early threat warnings and protection from evolving threats
- Identify and automatically control the flow of sensitive information via email, IM, and Web
- Streamline management with optimized workflows for critical security tasks, freeing administrators and end users from unproductive tasks
- Provide maximum visibility into actions, events, and status from endpoints and messaging infrastructure with insightful reporting

Symantec™ Protection Suite Enterprise Edition for Gateway includes:

Symantec™ Brightmail Gateway—delivers inbound and outbound messaging security, with effective and accurate real-time antispam and antivirus protection, advanced content filtering, data loss prevention, and email encryption. It has been benchmarked at catching more than 99 percent of spam with very few false positives¹, leveraging real-time automatic updates, global and local IP reputation analysis, and comprehensive reporting to deliver cost-effective protection against new messaging threats.

Symantec™ Web Gateway—an innovative secure Web gateway appliance that protects organizations against Web 2.0 threats, spyware, botnets, viruses, and other types of malware, and provides controls for Web and application use. Backed by the Symantec Global Intelligence Network, the Symantec Web Gateway is built on a scalable platform that quickly and simultaneously scans for malware and inappropriate Web content, helping organizations maintain critical up time and employee productivity, which can suffer when organizations come under attack. URL filtering is available as an add-on option; however, today's complex malware threats require more than just URL filtering. Instead, to fend off the threats thrown at organizations today, a comprehensive secure Web solution is required. Symantec Web Gateway is well positioned to help keep organizations secure against threats today, tomorrow, and in the future.

Symantec™ Mail Security for Microsoft® Exchange and Domino—provides real-time protection for email against viruses, spam, spyware, phishing, and other attacks while enforcing content policies on Microsoft® Exchange Server 2003, 2007 and 2010 and Lotus Domino® email servers, documents and databases. Powered by Brightmail™ technology, Symantec has been benchmarked at catching more than 99 percent of spam with very few false positives², and supports 64-bit Windows® and

virtualized Exchange Server environments with easy installation and simple administration. Normally a premium add-on to the products, Symantec™ Premium AntiSpam is included and integrates seamlessly to provide superb spam-blocking and –detection capabilities.

Symantec™ Network Access Control Starter Edition—makes it simple to deploy a network access control mechanism that can be leveraged as your network access control deployments mature. When paired with Symantec™ Endpoint Protection, it can limit access to only endpoints that comply with your defined security policies, using compliance status evaluation and automatic remediation to help ensure that access is properly provisioned and secured.

Symantec™ Workflow—connects people, process, and information to optimize efficiency, enforce policies, reduce costs, and automate redundant tasks. Accelerate the delivery of IT and business process without having to know complicated code or adding undue costs. Symantec Workflow helps to ensure that nothing slips through the cracks by auditing and enforcing human and automated activities. Give process-creation power to the people who actually define processes, with a visual, self-documenting workflow designer. Provide higher-level process management and oversight while integrating Symantec and other environments to make business processes seamless and cost-effective throughout the organization.
