

Symantec™ Control Compliance Suite for Novell NetWare/NDS

Simplifies compliance, security and administration of Novell® NetWare®/NDS with automated controls assessment

Overview

Symantec Control Compliance Suite for Novell® provides customers with the most comprehensive administration and security solution on the market today for NetWare and NDS eDirectory. CCS for Novell empowers users to automate the assessment and remediation of configurations to technical standards on virtually every aspect of their Novell environment.

Today, managing risk in an organization is made more difficult by the variety of security issues and the need to comply with multiple external regulations. Recent research indicates that companies investing in one-off solutions for each regulatory challenge they face will spend substantially more on IT compliance than those that develop a single solution to manage multiple regulatory requirements. Organizations are seeking tools to simplify and centrally manage their business-critical systems with maximum efficacy.

Symantec Control Compliance Suite for Novell applies advanced, cost-effective technology to administer and secure the safety and reliability of NetWare servers while also providing a method to proactively assess, secure and manage their NDS eDirectory. It provides precise reports about where an organization does-or does not-comply with internal technical standards, as well as ad hoc querying capability. Symantec Control Compliance Suite also outlines specific steps for

addressing non-compliant systems, and the ability to perform in-console remediation.

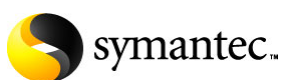

Key features and benefits

Tracks compliance to IT controls related to important regulations and frameworks

- Supplies regulatory content for Sarbanes-Oxley, FISMA, HIPAA, GLBA, Basel II, and framework content for ISO 17799, COBIT, and NIST SP800-53
- Validates the configuration of Novell systems against corporate information security standards and regulations
- Provides an efficient means to assess compliance to control systems based on custom mappings between technical standards and frameworks and regulations
- Displays pass/fail scores against industry regulations and governance frameworks based on technical check assessments
- With Baselining technology, documents file server configurations, allowing administrators to run against initial "baseline report"
- Reports on the level and extent of access to sensitive corporate assets

Streamlines the protection and management of Novell systems in complex and distributed IT environments

- Monitors NetWare and NDS systems from the same

Datasheet: Compliance and Security Management Symantec™ Control Compliance Suite for Novell NetWare/NDS

central console that is used to monitor the network, databases and applications

- Ships with more than 600 out-of-the-box reports which automatically identify conditions that can threaten enterprise security
- Delivers query flexibility and granular control, down to individual machine level
- Reduces cost of redundant checks being performed for various standards by using an offline view of scans
- Sends by email a link to compliance results that can be viewed anywhere in your environment using Microsoft® Internet Explorer

Assures comprehensive, immediate closed-loop remediation to minimize vulnerabilities

- Automates change management for organizations using Remedy® or HP® Service Desk
- Implements closed-loop remediation through integration with Remedy® or HP® Service Desk
- Verifies that all tickets are "fixed" or "closed," and the tasks required have been performed correctly
- Reports on all incidents opened by Symantec Control Compliance Suite, including a view of notes and status

Reduces security risks by closing security holes, enforcing compliance standards and implementing security policies across the enterprise

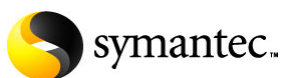

- Performs enterprise-wide effective rights analysis on NDS objects via security equivalencies, group membership, trustee assignments or inherited rights filters
- Reports on ZENworks security and controls

configurations

- Finds stale or unused user accounts/files and enables deletion with few simple mouse clicks
- Locates users with weak passwords and require password changes
- Simplifies problem resolution using exclusive technology that allows administrators to make changes to eDirectory by clicking on fields within a report
- Extended channel support for Novell Audit (Oracle® and SQL Server)

Integrates with Symantec Bindview™ Policy Manager to provide proof of security configuration compliance with broader corporate policy

- Provides a single compliance architecture for managing multiple regulations, by integrating with Symantec Bindview Policy Manager
- Reduces the cost of compliance by automating the assessment of IT policies against industry regulations and best practices

Certification & Endorsements

Novell YES certification, demonstrating the highest level of compatibility with Novell products
