

CCS Federal Toolkit

Targeted Compliance Solution for the Federal Market

The Control Compliance Suite Federal Toolkit provides a targeted solution for agencies to report on the Federal Desktop Core Configuration (FDCC) requirements set forth by the Federal Government's Office of Management and Budget (OMB). The CCS Federal Toolkit takes full advantage of the Security Content Automation Protocol (SCAP) and is extensible to any new security configuration requirements that may emerge based on these standards.

The CCS Federal Toolkit provides complimentary capabilities to those already present in the full Control Compliance Suite product and when used together provide a unified compliance management solution for the Federal market. Control Compliance Suite provides end-to-end coverage for the IT compliance lifecycle, including policy management, technical and procedural controls assessment, reporting and remediation. CCS provides the most comprehensive view of risk and compliance posture with a combination of point-in-time controls assessment and real-time monitoring of risks and threats. Evidence of compliance can be agentlessly gathered on configurations, permissions, patches, vulnerabilities, and manual attestation of procedural activities. CCS is an open architecture that enables integration with business processes and other external solutions.

Solution Benefits

- Identify and report upon deficiencies uncovered by NIST security configuration guidelines at an organization-wide level
 - Test core security configuration changes before implementing them in a production environment and rollback selected changes if configuration issues arise
 - Remediate configuration deficiencies for desktops and place them into compliance quickly and easily
-

Key Features and Benefits

Operationalize Compliance

- Implement baseline and system configurations before deploying new assets
- Apply authorized deviation/exception profiles quickly and easily
- Automatable scanning allows administrators to identify missing security patches and other deficiencies which could raise vulnerability threat posture

Reporting and Access Control

- Report on compliance posture to FDCC and other future mandates
- Roles based access view permits read-only access to compliance status.
- Secure authentication is enforced to view and apply settings.

Ease of Use and Flexibility of Deployment

- Schedules jobs to reduce the cost of redundant and often-repeated technical assessments
- Agentless technology eases deployment and maintenance
- Agent based capabilities to meet varying customer needs

Flexible Platform Support

- Windows XP, Windows Vista, Windows Server 2003, Red Hat 5, and Solaris 10
 - Extensible architecture and SCAP standards based content model provide the flexibility to support new platforms as content is made available by the SCAP community
