

Top 10 Benefits of Symantec Protection Suite

The next generation of protection is here today with the launch of Symantec Protection Suite. Leveraging more than 25 years of experience, Symantec now offers multi-layered protection from endpoint to gateway in this new security solution. Symantec Protection Suite includes an unparalleled combination of award-winning technologies from a world leader in security and data protection and enables you to completely protect, easily manage, and automatically control the assets most crucial to your business.

Below are the top 10 reasons to choose Symantec Protection Suite:

1) More than antivirus

Provide end-to-end protection of laptops, desktops, servers, mobile devices, messaging, and Web infrastructures with more than traditional antivirus and antispymware. Proactive technologies, such as TruScan™ Proactive Threat Scan, provide protection against unseen threats (i.e., zero-day threats) and do not rely on signatures.

2) Effective and accurate antispam protection

Protect from spam and phishing threats with industry-leading antispam technology that catches more than 99 percent of spam with less than one in a million false positives.

3) Fast protection at the Web gateway

Protection against malware threats on all Web 2.0 file transfer channels, both inbound and outbound, helps ensure environments are secure against one of the fastest-growing methods of malware propagation.¹

4) Rapid and reliable recovery

Extend protection to include desktop/laptop backup and recovery. Easily restore data or systems and protect against new threats through automated, event-driven backups.

5) Proven technologies

Protect with confidence with the market-leading endpoint security, messaging and Web security, data loss prevention, and system recovery vendor.

6) Increased savings

Save up to 70 percent² with the purchase of Symantec Protection Suite while eliminating additional steps and costs with one decision, one purchase, and one strategic vendor relationship for complete protection.

7) Fast and easy protection

Deploy all Protection Suite technologies with minimal disruption and through easy management. And with the new launch of Symantec Endpoint Protection Small Business Edition (SEP SBE), easy, out of the box protection is achieved through built-in tools and recommended security settings. In fact, SEP SBE does not require additional configuration and takes less than 20 minutes to install and deploy.^{3, 4}

1. Web Gateway core software subscription available in SPS EE. Separate appliance required.

2. 70% savings compared to buying point products

3. SEP SBE available in SPS SBE only

4. Based on internal Symantec testing, Jan. 2009

8) Safeguard intellectual property

Secure sensitive data and valuable confidential information at the messaging gateway with advanced content filtering and data loss prevention.

9) Ensure compliance

With network access control, prevent security outbreaks and increase levels of compliance by automatically enforcing security policies and standards.⁵

10) Flexibility you need

Whether you are a small business or large enterprise, Symantec has designed a security suite to meet your exact business needs through our offering of Small Business and Enterprise Editions of Symantec Protection Suite.
