

Symantec™ Control Compliance Suite: Management Pack for MOM 2005

Add comprehensive, automated compliance checks to Microsoft® Operations Manager 2005

Overview

Organizations worldwide are establishing and enhancing IT security standards to ensure compliance with multiple external regulations. To effectively close a compliance gap and maintain a secure state, organizations need to be able to leverage their existing tools for effective enterprise-wide compliance monitoring.

Symantec Control Compliance Suite provides automated assessment of configurations to technical standards and industry best practices. The Symantec Control Compliance Suite: Management Pack for MOM 2005 allows organizations to integrate compliance information from Symantec Control Compliance Suite into the Microsoft MOM product. This integration makes configuration management and compliance information from Symantec Control Compliance Suite available for Windows®, Microsoft® Exchange, UNIX®, Linux®, Novell®, Microsoft® SQL Server, Check Point® and Oracle® via the MOM console. With the Symantec Control Compliance Suite: Management Pack for MOM, organizations can have a more granular view of compliance risk across their enterprise.

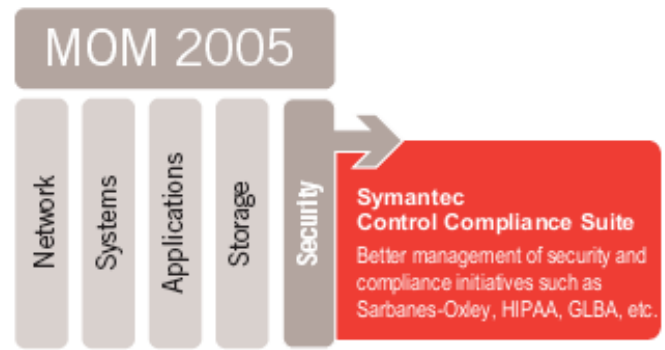

FIGURE 1 - The Symantec Control Compliance Suite: Management pack for MOM 2005 makes both high-level and granular security information available via the MOM 2005 console

Technical Capabilities

Comprehensive data mining and system analysis is needed to assure environments meet regulatory compliance and corporate policy requirements. Adding Symantec Control Compliance Suite analysis to MOM creates a powerful and efficient end-to-end compliance and security monitoring system.

DEMONSTRATE DUE CARE IN COMPLIANCE

Symantec Control Compliance Suite allows organizations to build and measure IT security standards and then assess and audit adherence to these standards. Alerts are triggered from the console if checks are outside user-defined limits. Implementing and maintaining compliance with industry best practices, such as the CIS Benchmarks, helps establish a baseline for information security standards, which in turn can help protect organizations from liability.

Demonstrate Due Care in Compliance - continued

The Symantec Control Compliance Suite: Management Pack for MOM helps organizations better track, via the MOM console, their adherence to government mandates such as:

- Sarbanes-Oxley
- FISMA / NIST
- FERC / NERC
- GLBA

AUTOMATE CONFIGURATION VERIFICATION

Verifying configurations and patch status on remote machines is difficult, especially when there are a large numbers of machines in the enterprise. Using Symantec Control Compliance Suite, verification for thousands of security and configuration settings requires just a few clicks of the mouse, from the operator of the MOM Console. The Symantec Control Compliance Suite: Management Pack for MOM provides integration data allowing MOM operators to:

- Identify improperly configured systems avoiding costly attacks and system failures
- Provide a responsible level of security and minimize administrative costs without compromising performance
- Reduce the internal costs associated with attacks and other security failures

LOCK DOWN YOUR NETWORK

The Symantec Control Compliance Suite: Management Pack for MOM helps enable customers to use the MOM console to locate:

- Nodes susceptible to vulnerabilities
- Inappropriate rights to files and directories
- Missing security patches
- Common security misconfigurations

DECREASE INCIDENT RESPONSE TIMES

Once an organization defines acceptable levels of risk, Symantec Control Compliance Suite measures the risk, consolidating alerts that can be forwarded to the MOM Operator Console. Operators can drill down to uncover specific information that represents a potential security threat to the organization. Whether information is required for mail servers, file servers, Web servers, remote access servers, or other business-critical systems, IT managers are able to collect and evaluate data on thousands of servers and desktops throughout the enterprise and providing a single alert to the MOM Console operator.

AUTOMATE VULNERABILITY ASSESSMENT

The Symantec Control Compliance Suite: Management Pack for MOM provides comprehensive data gathering and reporting capabilities via the MOM Console. Symantec Control Compliance Suite eliminates network vulnerabilities across disparate platforms and provides a cost-effective method to manage global IT risks. In effect, you have a comprehensive, rapid, single-stop

solution for all compliance assessment, audit and security reporting needs.

SCALE TO THE LARGEST WINDOWS® ENVIRONMENT

Managing agents on thousands of servers drains resources when memory leaks, agent service incompatibilities occur, or when software patch maintenance is required. With its scalability to any size enterprise—and no requirements for agents on every server—the Symantec Control Compliance Suite: Management Pack for MOM 2005 further simplifies security management for large environments.
