- Oracle database management
- IT monitoring
- Green IT

A division of one of the country's largest companies with 36 million subscribers, China Mobile Group Zhejiang Company Limited must keep up with cutting-edge technology to retain a competitive edge in the rapidly-growing telecommunications sector. At the helm of this effort is Wang Xiaozheng, the firm's director of system optimization in the IT department's Business Operation Support Center. Symantec is proud to announce his selection as a 2008 Greater China Visionary.

Focused on constant improvement of quality of service delivered to customers, Wang and his team have standardized the company's IT infrastructure on a variety of Symantec products to improve application availability and prepare for a new disaster recovery plan. Using Veritas Storage Foundation for Oracle RAC, the company can use a file system instead of a raw device to store their Oracle database which provides easy management, and reduced storage, power usage and licensing costs. The solution also prevents a single point of failure, therefore increasing system availability, performance, and scalability. Wang's team has also standardized on Veritas NetBackup for data protection across their heterogeneous enterprise. With regard to security, the firm depends on Symantec endpoint security and security management solutions, and Symantec Brightmail Gateway provides inbound and outbound messaging security for email and instant messaging with data loss prevention technology. Symantec Consulting Services provided advisory and deployment assistance, supplemented by further assistance from Symantec Partners AsiaInfo Technology (China) Inc and Beijing Teamsun Technology Co., Ltd.

Wang's team has seen impressive results from these deployments. Using Storage Foundation for Oracle RAC, China Mobile Zhejiang Company Limited has improved overall storage utilization and has seen a reduction in the number of licenses needed. The overall data center standardization project has saved approximately \$300,000 USD per year in IT staff time, as well as \$100,000 USD worth of improved staff productivity throughout the organization.
