

Symantec AntiVirus™ for Macintosh®

The world's most trusted antivirus solution for Macintosh systems

Overview

Symantec AntiVirus™ 10.0 for Macintosh® automatically removes Mac® and PC viruses from email attachments, Internet downloads, and other sources to safeguard the corporate network. Centralized deployment, administration, reporting, and distribution of virus definition updates simplify enterprise-wide management of Mac clients.

Key benefits

- NEW! Administration console centralizes enterprise-wide management of Mac clients protected with Symantec AntiVirus™ for Macintosh® 10.0 under Mac OS X
- Administrators can view the security status of Mac clients, receive immediate notification of a virus event, and manage client installation and configuration from the console
- Protects against PC as well as Mac® viruses, preventing Mac users from unknowingly spreading PC viruses to colleagues on the network
- Console utilizes stable open source technologies including Apache Web server, MySQL, and PHP
- Console uses standard Apple installation protocols for compatibility with Apple Remote Desktop and other software distribution tools
- Auto-Protect finds viruses within file archives

- Automatically detects and removes known viruses in Internet downloads, email attachments, file transfers, and other incoming sources, and quarantines suspicious files until they can be evaluated
 - Quick installation starts protecting immediately
-

Additional Features

- LiveUpdate downloads new virus definitions and program updates automatically
 - Symantec Scheduler allows scheduled virus scans
-
