

Symantec AntiVirus™ for Messaging

Comprehensive and proactive email virus protection for messaging solutions

Overview

Symantec AntiVirus for Messaging provides high-performance, integrated mail protection against virus threats and other unwanted content for email traffic passing through multiple messaging solutions. Employing award-winning Symantec technologies that are optimized for speed, the solution imposes minimal resource demands on the messaging server. Symantec's extensible NAVEX™ antivirus technology defends against new and known viruses. With integrated LiveUpdate™ functionality, virus definitions can be deployed enterprise-wide without stopping scan services or incurring server downtime. In addition, the solution can be installed on or over the network on a separate server running Sun™ Solaris™, Red Hat® Linux, or Microsoft® Windows® 2000 Server or Windows Server™ 2003.

Features and benefits

- Provides scalable and reliable virus protection for email traffic passing through various messaging solutions.
- Employs award-winning Symantec technologies, including Symantec AntiVirus™ Scan Engine to detect viruses, worms, and Trojan horses in all major file types.
- Virus definitions and engines are updated automatically using Symantec LiveUpdate with no interruption in virus scanning.

- Easily accommodates growing traffic volumes with automatic load-balancing.
- Remote Web-based management console for virus protection, configuration, logging, reporting, and alerting.
- Runs on Sun Solaris, Red Hat Linux, and Microsoft Windows 2000 Server and Windows Server 2003 platforms.
- Backed by Symantec™ Security Response, the world's leading antivirus and Internet security research organization.
